ABSTRACTED-PUB-NO: FR 1485507A

BASIC-ABSTRACT:

Acid emulsions of hydrocarbon binders comprising 40-70% wt. hydrocarbon binder, 0.1-5% wt. cationic emulsifier, 0.1-10% wt. acid and 0.1-5% wt. stabiliser.

For application of hydrocarbon-resistant coatings of good mechanical strength to materials of varied granular size and to coatings known to be soluble as hydrocarbons.

The hydrocarbon binders can be butadiene/styrene butadiene/acrylonitrile acrylic and methacrylic resins, polyvinyl acetate, polyvinyl chloride, polyurethane, polyester, polyurea, etc. The emulsifiers can be primary, secondary, tertiary or quaternary aliphatic amines or polyamines, amino-acids, etc. The emulsions can also contain binders not resistant to hydrocarbons e.g. polydiene resins, coumarone/indene resins, colophony resins etc. without affecting their properties.
